

Syeda Hoorain Ali

Full Stack Developer & Certified Agentic AI Engineer

syedahoorainali8@gmail.com • +923 039 395441 • syeda-hoorain-ali.vercel.app • in@syedahoorainali • syeda-hoorain-ali • @syedahorainali

SUMMARY

Certified Agentic AI Professional Developer and Full Stack Engineer with hands-on experience building intelligent, production-grade web applications, autonomous AI agents, and automated workflows. Proficient in the full MERN stack, Python/FastAPI backend, and modern cloud-native deployment. Experienced with agentic frameworks including OpenAI Agents SDK, MCP, and n8n automation. Proven track record in hackathons, real-world client projects, and mentoring peers in the GIAIC/PIAIC community.

CERTIFICATIONS

Agentic AI Professional Developer – PIAIC

January 2026

Covers production-grade agentic systems, OpenAI Agents SDK, MCP protocol, multi-agent orchestration, and cloud-native AI deployment.

Prompt and Context Engineer – PIAIC

January 2026

Covers structured prompt design, context window management, RAG systems, image generation and AI-assisted software development workflows.

EXPERIENCE

Full Stack Developer Intern – Haventures

May 2025 – July 2025

- Built a full-stack e-commerce website from scratch using modern web technologies
- Implemented a secure authentication system integrated with AWS services
- Deployed the complete application on AWS, handling environment configuration and production setup

EDUCATION

Presidential IT Initiative (PIAIC) – Certified Agentic and Robotic AI Engineer

April 2025 – Present

Covers Python, OpenAI Agents SDK, Model Context Protocol (MCP), cloud-native architecture, agentic system design, Spec-Driven Development and Claude Code.

Governor Sindh IT Initiative (GIAIC) – Full Stack & AI Development

August 2023 – Present

Comprehensive program covering frontend (Next.js, React), backend (FastAPI, Node.js), databases, cloud deployment, and AI integration.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript
- **Frontend:** Next.js, React, Tailwind CSS, Shadcn UI, Figma, Loveable
- **Backend:** FastAPI, Node.js, Express.js
- **AI & Agentic:** OpenAI Agents SDK, OpenAI ChatKit, n8n Automation, RAG Systems, Vector Databases, MCP (Model Context Protocol), Spec-Driven Development (SpecKit)
- **Databases:** MongoDB, PostgreSQL, Supabase, Qdrant, Sanity CMS
- **Cloud & DevOps:** GCP (GKE, Artifact Registry, Cloud Run), AWS (EC2), Docker, Kubernetes, Kafka, GitHub Actions (CI/CD)
- **Integrations & Tools:** Stripe, Clerk, Twilio, Resend, Sanity, Cloudinary, HuggingFace, Git, Vercel

PROJECTS

CloudStream CRM – Digital FTE Factory (github.com/syeda-hoorain-ali/crm-digital-fte-factory)

Tech: Python, FastAPI, OpenAI Agents SDK, Official MCP SDK, PostgreSQL, Kafka, Redis, Docker, Kubernetes, GKE, GitHub Actions, React.js, Twilio, SpecKit Plus

A production-grade omnichannel AI customer support system built for the CRM Digital FTE Factory Hackathon. Handles customer queries autonomously 24/7 across Gmail, WhatsApp, and a web form. Features a 7-tool MCP server as incubation stage with Claude Code, PostgreSQL CRM with pgvector for semantic search, Kafka event streaming, real-time sentiment analysis, and intelligent multi-criteria escalation logic. Deployed to GKE with a 4-stage CI/CD pipeline (Docker → Neon test branch → Alembic migrations → GKE), horizontal pod autoscaling (3–30 replicas), and 440+ tests. Upcoming Grafana Dashboard

Personal AI Employee (github.com/syeda-hoorain-ali/personal-ai-employee-hackthon)

Tech: Claude Code, SpecKit Plus, Python, MCP Servers, Obsidian, Twilio, Odoo

An autonomous AI employee system that manages personal and business affairs 24/7. Uses Claude Code as the reasoning engine, Obsidian as a markdown-based management dashboard, and lightweight Python watchers monitoring Gmail, WhatsApp, and the filesystem. Includes multiple MCP servers for external actions, a human-in-the-loop approval workflow, autonomous LinkedIn/Twitter social posting, Odoo accounting integration, and a comprehensive error recovery system with circuit breakers and exponential backoff.

TaskFlow – Evolution of Todo (github.com/syeda-hoorain-ali/taskflow)

Tech: Python, Next.js, FastAPI, NeonDB, OpenAI Agents SDK, OpenAI ChatKit, Official MCP SDK, Docker, Kubernetes, Helm, Kafka, Dapr, SpecKit Plus, Claude Code

A 5-phase project demonstrating the full progression of a todo application from a Python console app to a cloud-native Kubernetes deployment.

Phase I: Python CLI with in-memory storage (SpecKit Plus + Claude Code).

Phase II: Full-stack web app (Next.js, FastAPI, NeonDB, Better Auth).

Phase III: AI-powered chatbot with natural language commands (OpenAI ChatKit, Agents SDK, MCP SDK).

Phase IV: Containerized local Kubernetes deployment (Docker, Minikube, Helm).

Phase V: Advanced cloud deployment with microservices, event streaming, and distributed runtime.

Physical AI Textbook (github.com/syeda-hoorain-ali/physical-ai)

Tech: Docusaurus, Python, FastAPI, OpenAI Agents SDK, OpenAI Chatkit, Qdrant, RAG, NeonDB, GitHub Actions

An interactive Docusaurus textbook on Physical AI and Humanoid Robotics with an embedded RAG-powered AI agent that answers questions across the full textbook content using semantic vector search. Built following the Spec-Driven Development methodology with Claude Code and SpecKit Plus, then deployed to GitHub Pages and Huggingface via GitHub Actions.

MINI PROJECTS

- **WhatsApp Real Estate AI Agent:** Automated real estate customer queries, bookings, and site visits via WhatsApp with Gemini-powered contextual responses and live Google Sheets sync.
- **Nike Store (Hackathon):** Figma-to-production e-commerce site with Clerk authentication, Stripe checkout and ShipEngine shipping.
- **ElevateCV:** Resume builder with multiple templates, Google/GitHub OAuth, Stripe for premium access, and Zod form validation.

ACHIEVEMENTS & COMMUNITY

- **Top 5 in Ramadan Prompting Nights Challenge (2026):** Scenario-based AI prompt engineering competition for GIAIC students; 30 daily challenges, 323 participants
- **100 Days of Coding Challenge (2024):** Completed intensive challenge covering JavaScript, TypeScript, React, Next.js, and full-stack project development
- **Ramadan Coding Nights Challenge (2025):** Built projects from CLI tools to advanced AI agents using Python
- **5+ Hackathons (2024 - Present):** Competed in multiple full-stack and AI-focused hackathons; built production-grade applications under time constraints
